

Sales Data Analysis Overview

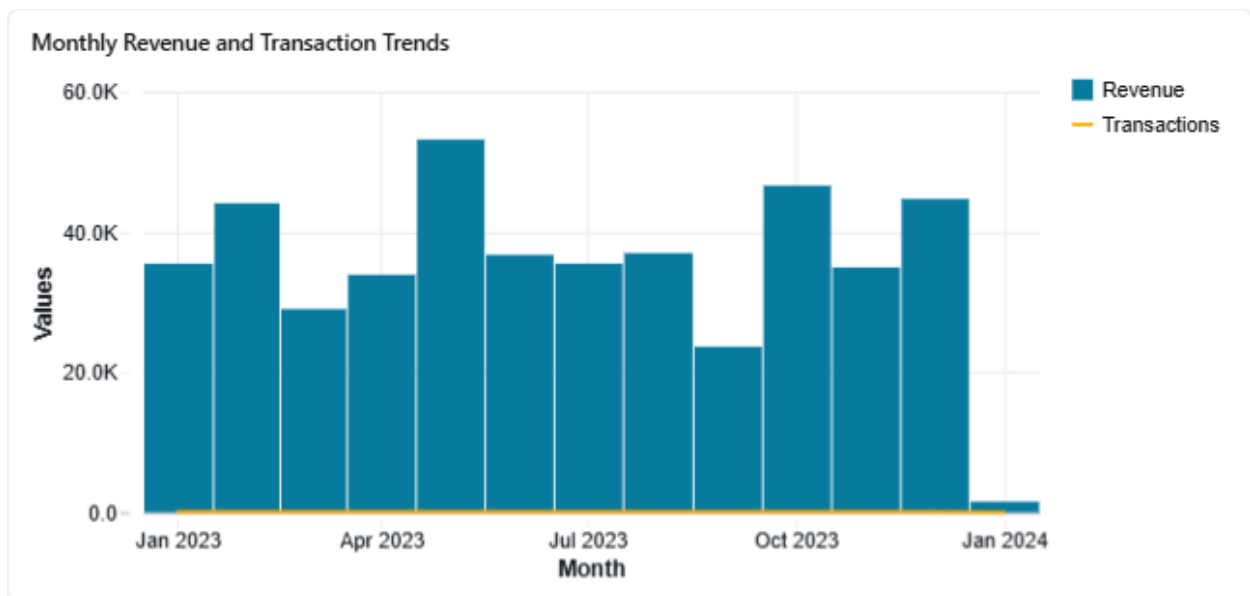

The dataset contains **1,000 transactions** spanning from January 2023 to January 2024, generating **\$456,000 in total revenue** with an average transaction value of **\$456**.

Sales Performance Summary				
Period Start	Period End	Total Transactions	Total Units Sold	Avg Units/Transaction
2023-01-01	2024-01-01	1,000	2,514	2.51

Key Findings by Dimension

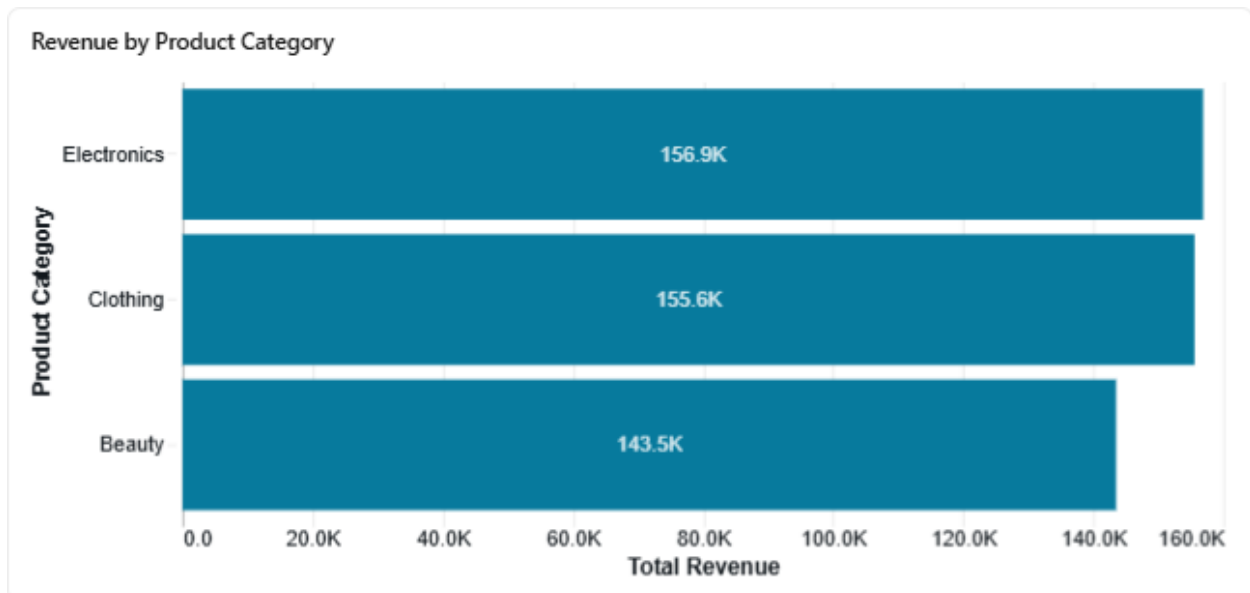

Date Trends

Monthly revenue fluctuated between \$23,620 (September 2023) and \$53,150 (May 2023), showing significant variability throughout the year. May 2023 was the strongest month with 105 transactions, while September was the weakest with only 65 transactions. The average price per unit also varied considerably by month, ranging from \$137 in September to \$212 in July.

Product Category Performance

Electronics led in total revenue at **\$156,905** (34.4% of total), followed closely by Clothing at **\$155,580** (34.1%) and Beauty at **\$143,515** (31.5%). The categories are remarkably balanced in terms of revenue contribution, with Electronics having slightly higher average transaction values (\$459) compared to Clothing (\$443) and Beauty (\$467).

Quantity and Pricing Patterns

Customers purchased between 1-4 units per transaction, with quantities fairly evenly distributed (253 single-unit purchases, 243 two-unit, 241 three-unit, and 263 four-unit transactions). The average transaction value scales linearly with quantity, from \$177 for single-unit purchases to \$707

for four-unit purchases. Price per unit averaged **\$180** across all transactions, ranging from \$25 to \$500, with an average of 2.5 units sold per transaction.
